

Developmental Disabilities Resource Guide for Healthcare Professionals

"Beauty is in the eye of the beholder, and so is disability."

-parent

Healthcare professionals play a critical role in ensuring that children with developmental disabilities and their families receive appropriate, timely, and effective supports and services. This includes providing all families with information on developmental milestones, listening when families express concerns about any aspect of their child's development, and providing medical and educational referrals when concerns arise. Following a diagnosis, additional supports may include sharing resources on developmental disabilities and available community supports and services, partnering with families and educational professionals, and using family-centered practices and disability-specific strategies to provide appropriate care.

Early Identification

Learn the Signs. Act Early., Centers for Disease Control and Prevention

<http://www.cdc.gov/ncbddd/actearly/index.html>

This site provides information, materials, and free resources for healthcare professionals and families related to typical and atypical child development and the early warning signs for developmental disabilities including autism spectrum disorders. Use this site for information on developmental screening, to find educational materials for families, and to help you play a key role in identifying developmental disorders early so that children receive essential early intervention.

Milestones of Child Development: A Guide to Young Children's Learning and Development from Birth to Kindergarten, Virginia Department of Social Services

<http://www.dss.virginia.gov/family/cc/publications.cgi>

Find this resource as well as information for families about selecting high quality child-care on the Virginia Department of Social Services website. Share the Milestones publication with families to help them become educated about developmental milestones so that they can be active partners in monitoring their child's progress and proactively addressing developmental concerns.

"Respect how overwhelming it is for parents."

Medical Home & Respect for Individuals with Disabilities

***The National Center of Medical Home Initiatives for Children with Special Needs,
American Academy of Pediatrics***

<http://www.medicalhomeinfo.org/>

Use this site to link to your state's Medical Home page, and to find information and resources on the principles of the medical home model, resources for families, screening initiatives, disability-related health topics, and publications including fact sheets on topics such as family-centered care.

Disability is Natural

<http://www.disabilityisnatural.com/>

This website provides information by Kathie Snow regarding language and attitudes related to people with disabilities. Whether or not you agree with Snow about People First Language, take time to understand the debate and to consider whether your language use matches the language chosen by the families who you work with and communicates respect and a positive attitude toward individuals with disabilities.

Additional Tips from Families:

- Have a handout with the names and phone numbers of private related-service providers (Occupational Therapists, Physical Therapists, Speech/Language Pathologists, Psychologists, and Psychiatrists) in your community that you can provide to families.
- Respect parents as the authority on their children.
- Avoid telling parents that "your child will *never*...." or "your child will *always*...."
- Describe the child's needs for support instead of his or her problems or disabilities
- Ask parents if they know of any accommodations that help their child tolerate medical exams or procedures more easily
